# Verizon Identity and Access Management (IAM)

## Building Trust in a Complex Environment

As your enterprise continues to grow and deploy multiple complex systems, processing and managing information about users—who they are, how they are authenticated, and what they can access—can become costly and ineffective. **Verizon Identity and Access Management (IAM) Professional Services** can help you efficiently manage user identities across multiple systems and applications.

## Understand How It All Fits Together

The Verizon Business Professional Services team can offer you an understanding of how complex IAM elements interrelate with one another, so you can map your requirements back to an overall strategy. We go beyond hardware/software distribution showing you how to use IAM as a business differentiator.

**Verizon Identity and Access Management** covers:

- Role-Based-Access-Control Systems
- Encryption Systems
- Physical Access to Facilities
- Digital Rights Management
- Records Security
- Data Privacy
- Partner Access

Our services include:

**Strategic Roadmap.** The Strategic Roadmap is an analysis of how your information assets such as applications, operating systems, and remote access devices can be aligned with your IAM strategy. Through interviews, asset reviews, and comparisons to industry best practices and trends, we can offer vendor neutral recommendations for helping you meet your IAM related business, technical, and security goals.

Roadmap development is conducted in three phases: Discovery, Review, and Presentation.

**Identity and Access Management Deployment.** The Management Deployment Methodology is a proven, reliable method for IAM solution identification and enablement. Verizon Business provides IAM Deployments through the use of a step-by-step approach consisting of:

- Solution development
- Proof-of-Concept
- Limited pilot deployment
- Phased implementation
- Production-ready status

## features

- Clear understanding of interrelationship of diverse IAM solutions
- Simple alignment of technological requirements to strategic goals
- Seamless deployment from plan to production-ready solutions

## benefits

- Reduces the complexity of IAM solutions
- Helps control “mission-creep” with effective planning and deployment

## professional security services

### **Efficient, Experienced, Effective**

Verizon Business takes a business-driven approach to information security—looking to determine your organization's individual risk profile before we make recommendations about the best information security plan for your business or agency. With more than 15 years security experience and 300 professional services consultants around the world, we aim to:

- Make the most of your existing assets using the people, technologies, and budgets already in place.
- Help you maintain a secure environment through ongoing security programs and regular assessments.
- Give you a competitive advantage through proven information security.
- Help you control the costs and pain around reactive, symptom-driven information security approaches.

### **Why Verizon Business?**

Our solutions combine security and infrastructure to help you secure data, identities, and your customers' confidence from the desktop, along your network, and around the world. Your company's reputation and your customers' trust are some of your most valuable assets. Verizon Business is ready to help you mitigate security risks and secure your network to help you retain your customers' trust.
