Verizon CorporateSSL

Control Costs, Reduce Complexity of Securing Web Servers

Your organization's reputation can sometimes rely on public certificate vendors issuing credible SSL server certificates. If a certificate is not trustworthy or credible, it can negatively impact your online service. We can help.

Verizon CorporateSSL Certificates

Verizon CorporateSSL provides the capability to issue your own SSL certificates on demand. This web-based, turnkey SSL certificate provisioning solution is available for organizations of all sizes. The solution helps control costs and reduces the complexity of managing certificates for multiple web servers.

Many organizations now require multiple SSL certificates. While SSL certificates have traditionally been designated one server at a time, Verizon CorporateSSL service allows you to issue, revoke, and renew your certificates whenever you need them, rather than waiting for individual certificates to expire.

How It Works

With Verizon CorporateSSL service, certificates can only be issued by a certified account administrator. To uphold our strong authentication standards, we will verify your right to a domain name, your right to the name of a business, and that you have the right to apply on behalf of your organization. Using the administrator's digital certificate, you can then request and issue certificates on demand. And using the same management interface, your administrator can keep track of all the certificates used in the account.

Purchase Multiple Certificates With Volume Pricing

Our service allows you to purchase certificates that are valid for 1, 2, or 3 years from date of issue. Blocks of certificates are discounted based on volume and validity period, and rollover pricing allows you to carry unused certificates over into the next service period when you renew your contract.

Issue SSL Certificates on Demand

Certificates you issue through Verizon CorporateSSL service can be issued and revoked on demand.

Why Verizon Business

Our solutions combine security and infrastructure to help you secure data, identities—and your customers' confidence—from the desktop, along your network and around the world. Your company's reputation and your customers' trust are some of your most valuable assets. Verizon Business is ready to help you mitigate security risks and secure your network to help you retain your customers' trust.

features

- Certificates are valid for 1, 2, or 3 years from date of issue
- Carry unused certificates into next service period when you renew your contract
- Conveniently purchase multiple SSL certificates with an affordable sliding price scale based on quantity

benefits

- Control over the complete SSL certificate lifecycle, from request to revocation
- On-demand certificate availability removes renewal lag time
- Provides trust and security because certificates can only be issued by your organization's certified account administrator
