Site Services

Verizon Business is making network deployment as easy and as efficient as possible for our customers while saving time and providing value. Our suite of Site Services is designed to help companies quickly and efficiently prepare their networking environments for a broad range of VoIP, Internet, and data solutions. Whether customers are tasked with extending demarcation, conducting a LAN assessment in preparation for a new application/service, or preparing cable to accommodate new employees, Site Services offers a one-stop resource for network deployments from beginning to end.

We provide technical service and support to enterprise customers of all sizes through our expanded Site Services portfolio, which includes:

- **Inside Wiring.** Installation of wiring to connect two pieces of equipment (i.e., wiring runs from the switch in the server room to a desktop client)
- **Extended Demarcation.** Installation of wiring that extends from the Verizon demarcation point to some point within the customer's building that is closer to their equipment (e.g., to the server room where the router resides)
- **Site Survey.** A survey of the proposed location for installing CPE and a report on that location's suitability for that purpose with respect to environmental conditions (e.g., temperature, humidity, obvious contaminants, or nearby magnetic radiation sources), the availability of an appropriate power source, and the need for any additional inside wiring
- **Site Audits.** An inventory of the customer's site, which includes tasks that audit device types, track serial numbers, measure circuits and power availability, and identify demarcation locations
- **Site Assessments.** Assessments that ensure a customer's existing technology and infrastructure environment is capable of supporting additional applications or services (Verizon Business will evaluate variables such as bandwidth utilization, network traffic, latency interference, and environmental characteristics, and then make recommendations regarding whether infrastructure upgrades are necessary.)
- **Installation and De-installation Services.** Service that helps customers ready their networking environments for next-generation customer premises-based services at their site or install/de-install customer-furnished equipment, racks, shelves, and miscellaneous devices from Verizon Business or a third-party vendor

What This Means to Customers

- Verizon Business offers standardized end-to-end network deployment for enterprises of all sizes, which means customers can work with just one provider.
- Verizon Business can customize a complete Site Services solution for any size enterprise.
- In many instances, Site Services allows customers to free up IT resources since Verizon Business is already handling a part of the installation, such as CPE.

features

- Deployment expertise – National Technical Solutions (NTS) organization
- Customization and a full range of services
- Complement to Verizon Business services to provide a complete solution

benefits

- One source for network deployment
- Quick and efficient network preparation
- Streamlined implementation and change management

customer premises equipment

- Verizon Business offers an experienced National Technical Solutions (NTS) group that has been performing these types of services for more than 15 years.
- Site Services are offered in the 48 contiguous United States.
- Site Services are priced on a standard, time-and-material, or custom basis.
